Industrial Contract Tickets confer a right to travel solely by the Industrial Train and by no higher class than that for which they are issued. If a holder chooses to travel by another train in a higher class than he contracts for, he must pay the ordinary fare as if his Industrial Ticket had no existence.

The term "Industrial Train" is confined strictly to that ordinary Passenger train which is due first to arrive from the country each week day morning at Port Louis, and to that ordinary Passenger Train which is notified to leave Port Louis last at night.

SECOND AND THIRD CLASS MONTHLY CONTRACT TICKETS

Available for travelling by Ordinary Trains or Industrial Trains between Port Louis and the following Stations.

When goods are sent from one Station or Siding to another on behalf of an Estate entitled to the benefit of "Provision" rates, if the distance between the Stations is less than that between Central and the receiving Station, while the second class rates are higher than the Provision rates from Central, then the transport may be charged for at the lower rates.

In all cases if there is a siding rate it shall be charged in addition to the above rates.

Sugar is rated at 75 kilos per bag, the gross weight of which is not over 78 kilos. Senders are to give special notice if their bags weigh less than 75 kilos, in which case the reduced weight only will be charged for.

All empty casks remaining at a station after the transport of molasses from that station is completed, will be returned to Central at the rates given in above table.

From the 1st. September in one year to the 31st. January in the next year, the molasses for exportation shall be carried at 2nd. class rates and the casks at half third class rates.

Molasses for Distilleries.

1. During the whole year molasses for distilleries sending their rum by railway shall be carried at the following rates.

For the first 10 miles 10.00cts. per ton per mile.

„ „ 30 to 40	„	3.75	„	„

2. The actual weight found will be charged for. In case no weighbridge is available 10 tierces shall be considered as weighing 3 tons.

3. In calculating distance, the length of the siding shall be included, and fractions of a mile shall be counted as a whole mile, also distances under three (3) miles shall be reckoned as 3 miles.

4. Empties will be sent free.

5. A distiller desiring to have molasses conveyed to his distillery must give notice in writing to the Station Master of the station at which they are to be loaded two days beforehand, and notice shall be given to him two days previous to the day the waggons shall be placed at his disposal.

After the waggons are placed at his disposal, he will be allowed a working day for the loading of five waggons; if he exceeds that time, he will pay demurrage at the rate Rs. 2 per 24 hours of detention. As regards unloading at the other end, the same delay will be granted as for loading.

- Number of waggons required daily, or approximate number of tons it is proposed to transport daily.
- Station or Siding at which the canes are to be loaded, and Station or Siding at which the canes are to be unloaded.
- Period for which the waggons are required (if possible).
- Date of commencement of transport.

3. In reply, the General Manager will state number of waggons which can be supplied if any, and the date on which they will be at the loading station. He will also state by what trains the loaded waggons will be taken to their destination, and by what trains the empties will be called for, allowing a reasonable delay to be agreed upon with the General Manager for loading and unloading the waggons.

4. As it is important that there should be no unnecessary delay in the loading, unloading and forwarding of cane waggons, the following detention fees will be charged in case the waggons are not ready to be forwarded by the trains agreed upon—namely :

At Sidings, if possible, such notice must also be given.

6. Notice must be given to the Station Master when the waggons are no longer required.

7. The Station Master at any Station and the Driver and Guard of the train at Sidings shall have full power to reject all waggons which they consider unsafe to travel, through bad loading or excess loading, and the sender shall have no claim for compensation, if in fault.

8. If canes are transported to or from private Sidings, in calculating the rates, the distance of the siding from the station and the length of the Siding shall be taken into account.

9. If canes are conveyed from a Station or Siding on the North Line to a Station or Siding on another line or *vice versa* two charges shall be made: One for the number of miles on the line from which the canes start, and the other for the remaining number of miles on the other line; the reduced rates of the siding scale under section 2 being applied in all cases after the first ten miles.

10. If there is a waggon weigh-bridge belonging to the Railway Department on which the canes can be conveniently weighed *en route*, the weight thus found will be the one charged for.

11. If there is no such waggon weigh-bridge but there is one on the Estate to which the canes are sent, the canes will be weighed on it, and the weight thus found will be the one charged for; the Railway Department reserving to itself the right of testing such weigh-bridge at any time and of sending an "employé" to supervise the weighing at any time.

12. In the event there being no Railway waggon weighbridge and no Estate waggon weigh-bridge available, then the charge shall be according to the size of the waggon—namely,

10	"	L.
14	"	X or Y
12	"	R.

The rates enumerated in para. 2 apply only to canes forwarded to an Estate sending the whole of its sugar to town by rail. If the Estate to which the canes are consigned sends none, or part only of its sugar by rail, then the rates for the conveyance of the canes shall be increased by 50 per cent, but in case waggons are scarce, the General Manager will be at liberty to reserve them for the transport of canes of Estates sending all their sugar by rail.

Rum.

The rum must be placed in the waggons in presence of a trustworthy agent sent by the Distiller, and Government seals and padlocks shall be placed on them in his presence. The keys sealed up in a parcel in presence of the Distiller's agent must be forwarded direct to the Central Rum Warehouse or to the Customs Wharf, and on arrival there, the proper officer shall open and receive the same. The Railway Department shall not be liable for any deficiency in the quantity of rum as declared, unless it is proved that the seals have been tampered with after the waggon has been closed and sealed in presence of the agent sent by the Distiller.

Aloe leaves are carried at the following rates:

For the first 10 miles at 12 cents per ton per mile.

What is the Source of the Water Supply ; the Quality of the Water ; and the Amount of Water available for each Patient every day ?

What is the number of :

I. Lavatories ?

II. Baths ?

III. Latrines ?

What is the system of Sewerage ?

Supplied in iron pipes.

10. Plaines Wilhems Canal ; quality indifferent ; supply irregular during the dry season ; made use of for watering and cleaning purposes.

20. Mare-aux-Vacoas ; quality ordinary, good in the rainy season, made use of for drinking, cooking and bathing purposes ; quality inferior during the dry season. Had a marked smell of sulphuretted hydrogen during the last 3 or 4 months of the year. Is much improved by boiling and subsequent filtration.

Eleven.

Three shower baths, 4 hip baths, 6 large open and 2 slate baths.

Twenty three Latrines containing 52 tubs.

No Sewers exist on the Establishment for the removal of excreta, such removal being effected by means of the dry earth system. The tubs are collected every day by Prison labour and the service is on the whole regularly and satisfactorily performed. Rain water and that from the Bath rooms and wash house is carried off by surface drains and underground pipes to the vegetable gardens to be utilized for watering purposes. A new underground drain with glazed earthenware pipes was constructed in 1901 by the Surveyor General's Department to carry off the waste water from the kitchen, bath-rooms and latrines of the two Infirmarys to the back gardens. It is received into a covered collecting tank and used for watering purposes. As this system operates in a very satisfactory manner and is a great improvement on the old open drains formerly in use, the Superintendent of the Lunatic Asylum has recommended that all the waste water of the Establishment be removed by means of underground sewer pipe-drains into such covered collecting tanks in order to prevent the formation of pools in back gardens and their serving as suitable breeding grounds for the anopheles mosquitoes. This recommendation has been partly carried out in the Male Department during the year and it is expected that it will soon be completed.

- I. By whose authority patients are restrained.

II. What kinds of mechanical restraint are in use.

III. Whether any, and, if any, how many, cases of cruelty by Attendants to Patients have been brought to the notice of the proper authority, and what was the result in each case.

IV. What was the number of cases of injury to Patients:

(2) And other grounds 18 . 2 . 4

Belonging to the Asylum.

Are the Patients, as a rule, given daily exercise, their health permitting ?

Yes.

Are they confined to airing courts, or allowed to walk in other grounds and sent beyond the Asylum ?

Are any means taken to amuse the Patients or to induce them to amuse themselves ? Detail them ?

They are, weather permitting, sent in bands of about 50 for exercise and airing in the gardens of the Asylum.

The Asylum is provided with a magic lantern and a piano, and the female patients are frequently entertained by lady visitors who very kindly play and sing for them and make them dance. A cinematograph has been received for the special entertainment of the Lunatics.

How many religious services were held in 1904 ?

What was the average attendance ?

In what building and how many could it contain ?

No religious services are held in the Asylum.

The Catholics and Protestants are however frequently visited by the Ministers of their Religion.

RESULTS
OF
METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE YEAR
1904
AT THE
ROYAL ALFRED OBSERVATORY,
MAURITIUS.

INTRODUCTION.

The Observatory, in Latitude 20° 5' 39" S. and Longitude 3h. 50m. 12s. 6 E. of Greenwich is situated on a plain about three miles from the West coast and stands in eleven acres of Crown Land. The reference mark at the entrance of Main Building is 178.1 feet above sea level.

From the West-South-West through West to North there is an uninterrupted view of the sea and from North through East to South-East the ground generally rises to Mount Piton, the summit of which bears about four miles East-South-East and is 917 feet above mean sea level. Between South-East and South-West there is a chain of mountains the highest peak of which, the Pieter Both, bears nearly six miles due South and has an altitude of 2,874 feet.

The nearest extremities of two spurs which run North and North-West from the Pieter Both are at distances of 3 to 4 miles, and have an elevation of about 560 feet.

The Island is of volcanic origin and the rocks are more or less magnetic. Around the Observatory the soil has a depth of 3 to 14 feet, below which is solid basalt.

The results given in the tables refer to the civil day.

The mean daily values of barometric pressure, temperature of the air and of evaporation, and wind velocity, given in columns 1, 5, 6 and 16 are derived from hourly tabulations of the several meteorograms and are computed by the formula.

$$x = \left[\frac{x_0 + x_{24}}{2} + x_1 + x_2 + x_3 \dots + x_{23} \right] \div 24$$

in which $x_0, x_1, x_2 \dots x_{24}$ represent the value of the element at the hours 0, 1, 2... 24, Mauritius Civil Time.

The daily maximum and minimum temperatures, columns 2 and 3, are the highest and lowest points on each day's thermogram, duly corrected for instrumental error.

The mean daily temperature of the dew point, the vapour tension and degree of humidity, columns 7, 8 and 9, are deduced directly from the mean daily temperature of the air and of evaporation by the aid of Glaisher's Hygrometrical Tables, and are not the means of hourly values.

The amount of rainfall given in column 10 is derived from the records of the Beckley Pluviograph.

The numbers given in column 11 indicate the amount of water evaporated from a shallow vessel exposed on the lawn.

The amount of ozone, column 12, is determined by the discoloration of a strip of prepared paper exposed in a Sir James Clarke's ozone cage: the degree of tint produced is compared with a scale of graduated tints numbered from 0-10.

The mean daily amount of cloud, column 13, is the mean of observations made at 6h, 9h, 13h and 15h of the total amount of cloud, on a scale of 0-10; 0 representing a clear sky and 10 an overcast sky.

The mean daily direction and velocity of the wind given in columns 14 and 15 are computed from the mean daily North and East components as derived from the hourly measures of the anemograms. In column 16 is given the mean daily velocity of the wind as recorded by the anemometer, irrespective of direction.

The abbreviations under the heading weather have the following significance.

b	denotes	blue sky, cloudless	o	denotes	overcast
c	"	partially cloudy	p	"	passing showers
d	"	drizzle	q	"	squally
f	"	fine	r	"	continuous rain
g	"	gloomy	t	"	thunder
l	"	lightning	ts.m	"	thunder-storm

The day is divided by colons, usually into 4 parts, from 0h — 6h; 6h — 12h; 12h — 18h; and 18h — 24h except when the same remarks apply to two or more successive periods of 6 hrs. in which case the position of the colon indicates to what portion of the day the remarks apply. If in any division different types of weather are included, it is to be understood that they occurred in the order indicated.

In the table of monthly results (page 14), a clear day is considered to be one on which the mean amount of cloud is below 3 and an overcast day one on which the mean amount of cloud is above 7.

A "Rainy day" is one on which .005 inch, or more, of rain was measured.

All days on which thunder was recorded, even though no lightning was seen, are included under the head of "days of thunderstorm": those on which lightning was seen, but no thunder heard, have not been counted.

"Days of Gale" are those days on which the velocity of the wind for one hour was 34 miles per hour or upwards.

RESULTS OF MAGNETIC OBSERVATIONS IN 1904.

The magnetographs were at work throughout the year and absolute values of the magnetic elements determined as a rule four times a month. The following are the results for the year 1904.

Mean Declination West	...	...	...	9.14.9
Mean Dip South	...	...	...	53.54.45
Mean Horizontal Force (c. g. s. units)	...	...	...	0.23631
Mean Vertical Force (c. g. s. units)	...	...	...	0.32416
Mean Total Force (c. g. s. units)	...	...	...	0.49115

The largest magnetic disturbances occurred on May 12-13; June 15-16; August 3; October 21 and November 25.

MISCELLANEOUS WORK IN 1904.

Actinometric observations were taken on those days on which the sky was free from cloud in the neighbourhood of the Sun at or near apparent noon. The greatest mean effect for an exposure of 2 minutes was $9^{\circ}.95$ on February 3rd., the Sun's mean altitude being $86^{\circ}.28$ the least $8^{\circ}.29$ on June 21, the Sun's mean altitude being $46^{\circ}.20$.

The Milne Seismograph was at work throughout the year with occasional interruptions for adjustments, etc. 65 Earthquakes were recorded.

The Sun was observed on 328 days, on 321 of which spots were seen. During the year no spots were seen on 7 days of observation.

Rainfall returns were received from 56 stations in different parts of the island. The mean amount of rain collected during the year at all stations was 68.05 inches as compared with an average of 75.18 inches.

Observations made on board vessels in the Indian Ocean were tabulated and detailed accounts of gales and hurricanes recorded. From observations thus obtained, daily synoptic charts were prepared for the hurricane months, from which it appeared that during the year 1904, 5 cyclones occurred in the South Indian Ocean. The approximate tracks of the several cyclones were as follows:—

I. From 400 miles to the North West of Mauritius on February 14 to 400 miles to the West on February 16 and 350 miles to South West on February 18.

II. There were indications of a cyclone having passed to West of Bourbon between February 23 and 28 but its track has not been determined for want of sufficient data.

III. From 350 miles to the North of Mauritius on March 19 passed over Bourbon during the night of March 21-22 and then travelled on a Southerly track to 400 miles South of Mauritius on March 23.

IV. From 400 miles to the North East of Rodrigues on April 8 to 50 miles West of Rodrigues on April 11, curved rapidly and passed away to E. S. E.

V. On December 15 a cyclone passed very near Diego Suarez, but its track has not been determined for want of sufficient data.

Bulletins giving the daily values of the Meteorological Elements, with notes on Solar and magnetic disturbances, are forwarded monthly to 29 observatories and institutions.
